SOLOR & CIMI

Questions

Will SOLOR replace LOINC, SNOMED, RxNorm?

- SNOMED CT, LOINC and RX-Norm are foundational "source" terminologies in SOLOR. SOLOR fully supports and relies on these standards and their governing organizations. SOLOR's intent is to complement these standards and add value to them so that they may be used more easily and effectively.

Or, will SOLOR determine the best place for the code in terms of which standardized terminology works best?

- SOLOR will make the content available to any of the standard terminologies that would like to integrate that content (SNOMED, LOINC, RxNorm, and others). SOLOR cannot make commitments on behalf of these organizations, and these organizations are solely responsible for their content.

If there is not a concept available for CIMI to use, will they request the concept?

- You can request a concept be created in SOLOR by entering a JIRA ticket or by providing SMEs to be trained to enter content in SOLOR.

What type of clinical content is in the HSPC extension namespace in SOLOR?

- So far we have created and released Skin Wound Assessment Extension.
- Currently, working on Suicide and Vital Signs Extension and updates to Skin Wound Assessment

When will I know there is a new SOLOR release?

- Follow solor on twitter, or solor.io or HSPC SOLOR project

When will the content be available in the International version of SNOMED CT?

- We are working with SNOMED International – Jim Case on the process

What will be the process for CIIC/HSPC to release their models once they have been approved?

- Right now the only place is the FHIR profiles. Still working on the model repository

Have vendors committed to using these CIIC/HSPC models?

- There are several projects where these models are being used: ACOG/FPAR, Bilirubin App, Pediatric Growth Chart
